KSIL
2015

všetko, čo robíme, robíme pre deti...

DEXTRADE

Pre bezpečnosť detí je nevyhnutné dbať pri projektovaní, výstavbe a prevádzkovaní detského ihriska, na dodržiavanie tejto normy. Aj certifikovaný výrobok môže však byť pre dieťa nebezpečný:

- pokiaľ nie sú rešpektované pokyny výrobcu, týkajúce sa rozmiestnenia jednotlivých prvkov s prihliadnutím na bezpečnostné zóny,
- pokiaľ sa herný prvok nepoužíva v súlade s jeho určením,
- pokiaľ vek dieťaťa nezodpovedá zariadeniu, určenému pre jeho vekovú skupinu,
- pokiaľ zariadenie detského ihriska nie je pravidelne kontrolované a prípadné poškodenia nie sú okamžite odstránené.

Dôležitým faktorom pre zníženie rizika vzniku úrazu dieťaťa, je aj voľba správneho povrchu, tlmiaceho náraz. Rozhodujúcim pre výber správneho povrchu ihriska je možná výška pádu dieťaťa pri jednotlivých prvkoch zariadenia ihriska.

Podľa STN EN 1177 sú predpísané tieto druhy povrchov pre rôzne výšky pádu:

Materiál [a]	**Opis**	**Minimálna hĺbka** [b]	**Ktitická výška pádu**
	mm	mm	mm
Trávnik/ornica			≤ 1000 [d]
Kôra	Veľkosť častíc od 20 do 80	200	≤ 2000
		300	≤ 3000
Drevené štiepky	Veľkosť častíc od 5 do 30	200	≤ 2000
		300	≤ 3000
Piesok [c]	Veľkosť častíc od 0,2 do 2	200	≤ 2000
		300	≤ 3000
Štrk [c]	Veľkosť častíc od 2 do 8	200	≤ 2000
		300	≤ 3000
Iné materiály a iná hĺbka	Skúšané podľa HIC (pozri STN EN 1177)		Kritická výška pádu podľa skúšok

[a] Materiály, vhodne pripravené na používanie na detských ihriskách

[b] Pri sypkom časticovom materiáli sa pridá 100 mm k minimálnej hĺbke, aby sa kompenzovalo premiestňovanie materiálu (podľa STN EN 1176-1 čl. 4.2.8.5.1)

[c] Nijaké bahenné alebo ílovité častice. Veľkosť zŕn sa môže určiť použitím preosievacej skúšky, ako sa uvádza v EN 933-1

[d] Pozri poznámku 1 v STN EN 1176-1 čl. 4.2.8.5.2.

Pri plánovaní a výbere najvhodnejšej zostavy pre detské ihrisko je potrebné brať do úvahy viacero aspektov:

- špecifikácia krajiny, prostredia,
- sieť blízkych komunikácií,
- ochranné zóny,
- vekovú štruktúru detí,
- povrch,
- smer slnečných lúčov,
- estetické hľadisko.

Po vzájomnej konzultácií a zohľadnení aspektov navrhneme zákazníkovi rôzne varianty zostáv a riešení, vrátane spôsobu montáže.

Detské ihriská KSIL vynikajú svojou farebnosťou i typovou pestrosťou. Použitie tých najkvalitnejších materiálov pri ich výrobe, je základným predpokladom pre ich dlhú životnosť aj v tých najťažších klimatických podmienkach, ekologickú nezávadnosť a zvýšenú odolnosť voči vandalizmu.

OBSAH

Hojdačky

preklápacie	3
pružinové	3 - 7
visiace	7
Kolotoče	8
Šmýkačky	8 - 10
Pieskoviská	10 - 11

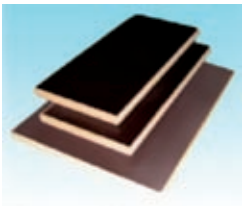
MATERIÁLY POUŽÍVANÉ PRI VÝROBE HRACÍCH PRVKOV PRE DETSKÉ IHRISKÁ

Pri výrobe prvkov pre detské ihriská KSIL sa používajú kvalitné materiály a moderné výrobné technológie a postupy. Použitie takýchto materiálov síce ovplyvňuje konečnú cenu výrobku, zároveň však má rozhodujúci vplyv na dlhú životnosť produktov KSIL a ich odolnosť nielen voči poveternostným vplyvom, ale aj extrémnemu zaťaženiu a vandalizmu. Našim cieľom je ponúknuť prevádzkovateľom detských ihrísk produkt, ktorého kvalitu ocenia aj po niekoľkoročnom používaní.

Borovicové drevo zo severských oblastí Ruska sa používa pri výrobe lepených, ako aj celistvých komponentov. Použité drevo je pred spracovaním podrobené dôkladnej kontrole kvality a špeciálnej úprave sušením na nábytkársku vlhkosť. Výroba nosných stĺpov z dreva, lepeného z viacerých vrstiev dáva tomuto komponentu mimoriadnu konštrukčnú pevnosť a stabilitu. Veľký dôraz je kladený na konečné obrúsenie hrán všetkých detailov.

Brezová preglejka je vynikajúcim konštrukčným materiálom. Pri výrobe prvkov sa používa tá najkvalitnejšia vodovzdorná preglejka. Dlhá životnosť a robustnosť tohto materiálu je využívaná nielen pri dekoratívnych prvkoch, ale aj pre zvýšenie stability a životnosti drevených konštrukcií. Zvláštna pozornosť je venovaná opracovaniu všetkých hrán z tohto materiálu do oblúkového profilu a jeho následnému obrúseniu.



Všetky **kovové detaily** sú bez ostrých hrán, so zaoblenými rohmi a dôkladne opracovaným zvarmi. Jednotlivé kovové prvky sú upravované podľa ich určenia galvanicky, elektrozinkovaním a povrchovo upravené práškovými farbami. Na výrobu šmýkačiek sa používa nerezový plech.

Plasty používané pri výrobe jednotlivých komponentov sú vyrobené z polykaronátu, polyetylénu a polypropylénu. Tento materiál sa vyznačuje svojou farebnosťou a stálosťou. Komponenty sú vyrábané vstrekovaním, alebo rotačným tvarovaním. Je to na rozdiel od vrstvených plastov na báze sklolaminátov, homogénny materiál. Takúto výrobu umožňujú len špičkové priemyselné zariadenia a technológie.

Polypropylénové **laná** sú vyrábané špeciálne pre detské ihriská a športové zariadenia. Pletené laná s kovovou výstužou sa používajú pre siete hracích prvkov, rebríky, závesné mostíky. Ich opracovanie a trvácnosť sú základom pre bezpečnú hru detí i odolnosť voči vandalizmu.

Náterové hmoty – materiál, ktorý výrazne ovplyvňuje nielen vonkajší vzhľad, ale aj dlhodobú životnosť hracích prvkov. Neustála kontrola kvality výrobných postupov a vstupných materiálov vo výrobe, umožňuje vybrať tie najkvalitnejšie farby renomovaných európskych výrobcov, určené pre detské ihriská. V prevážnej miere sú to dvojkomponentné farby, odolné voči poveternostným vplyvom, náročným klimatickým podmienkam a ultrafialovému žiareniu. Povrch elementov dostáva pri tom sympatický plastický vzhľad v pastelových farbách.
